

Bulls

REGISTERED HOLSTEIN BULLS: We now have a nice selection of service age bulls, sired by top AI sires. Green Meadow Farms, Elsie, MI. (989) 862-4291 or see our Web site at www.greenmeadowfarms.com.

Freeliner Policy

The Freeliners column is open to *current* MMPA members who wish to advertise – at no charge – goods or services relating directly to their dairy farm operations.

- An item submitted will be published for no more than two consecutive months. (One month, unless otherwise requested.)

- After that, it will be withdrawn.

- It will be published again for no more than two consecutive months only if the member resubmits the item by contacting their fieldman or by writing or calling the Novi office.

- Reference to a name of a firm or other commercial enterprise with which a member is involved will be deleted, with permission of the member.

- If the member does not wish such deletion, he may choose to have the item published as a Classified Ad at the regular per-line Classified Ad rate.

- Freeliners must be received by the 10th of the month preceding the desired month of publication.

Example – to be included in the January issue, the freliner must be at the MMPA office by December 10th.

SCOURS & DEHYDRATION KILLS CALVES

Prevention & Cure

American Farm Products
Animal Health Program

Maxibac®

~ Scours prevention and recovery

Maxibac® is a specialized calf gel with billions of digestive bacteria developed to stimulate appetite and improve digestive function.

The bacteria in *Maxibac*® are active antibody producers and will aggressively populate the calves gut, lower pH and inhibit harmful organisms such as E. coli, salmonella, pseudomonas, etc. *Maxibac*® is fast and effective.

Maxibac Calf Gel – 80cc Syringe

~ Available through MMPA Merchandise

Source E

~ Rapid rehydration for quick recovery

A scouring calf suffers three dangerous events; the loss of water, loss of electrolytes and a drop in blood pH. These events are what kill the calf.

Sodium Bicarb is a buffering agent found in many electrolytes. Because bicarb interferes with the clot of whole milk and nutrient absorption of milk replacer, the calf is usually taken off feed when an electrolyte is fed. Unfortunately, this is when a calf's body needs nourishment most.

Source E contains no sodium bicarb. Instead, *Source E* becomes a buffer only on contact with blood plasma – just where you need it. *Source E* is given between feedings. The calf never comes off feed and *Source E* never interferes with nutrient absorption. This is the perfect electrolyte.

**Source E – 4 oz. dose packs,
10 lb. and 25 lb. pails**

~ Available through MMPA Merchandise

KNIGHT 3300 REEL AUGIE MIXER WAGON, used 4 yrs., housed inside last 2 yrs., \$7,500, (989) 742-3749.
